Who This Is For

Obscura builds private AI for <u>the clinics America runs on</u>.

THE DESK TAX	2 hours of desk + EHR work per 1 hour of direct patient care. *Sinsky et al., Annals of Internal Medicine*
THE EXODUS	1 in 5 physicians intend to leave medicine within two years. *Mayo Clinic Proceedings survey*
THE EXPOSURE	$9.8M average healthcare breach — costliest industry, 14 years running. *IBM Cost of a Data Breach, 2024*
THE PEOPLE	31M+ patients depend on community health centers on thin margins. *HRSA Health Center Program, 2023*

The market is already paying — just not for everyone.

CATEGORY TODAY	$1.2–2.8B AI clinical documentation market, forecast ~$15B by 2034–35 (19–29% CAGR across analyst houses).
THE INCUMBENTS	Abridge $5.3B valuation · Suki $165M raised, 300 system & clinic clients · Nuance DAX list price $1,512/clinician/mo.
THE CEILING	All of it cloud. All of it priced for enterprise health systems with IT departments and BAA counsel.
THE OPENING	Most U.S. physicians work in practices of 10 or fewer (AMA benchmark) — the segment no cloud vendor prices for. That segment is ours, at $0.

WHO ALREADY BUYS CLOUD TRANSCRIPTION — ABRIDGE'S PUBLIC CUSTOMER ROSTER

Emory Healthcare	Yale New Haven Health
UNC Health	CHRISTUS Health
Corewell Health	U. Kansas Health System
Rochester Regional	Cambridge Health Alliance
Akron Children's	Lee Health
Riverside Health	Reid Health
Tanner Health	U. Vermont Health

Every name above signed with a cloud vendor. Every clinic below their size threshold could not — until the tooling became free and local.

What is needed for private clinical AI?

How does AI reach the exam room safely?

The clinic's reality				The clinician's need
Visit audio	→	?	→	Signed notes
Patient documents				Shareable, safe records
A messy file system				A protected machine
One aging laptop				Findable files

Not through the cloud.

Consumer AI tools won’t sign a HIPAA Business Associate Agreement. For a patient record, the upload is the disclosure.

The clinic’s reality

Visit audio

Patient documents

A messy file system

One aging laptop

→

Cloud AI scribes · chatbots · SaaS redaction

$299–$1,512 / clinician / mo
BAA + subprocessors to audit
PHI leaves the building

→

The clinician’s need

Signed notes

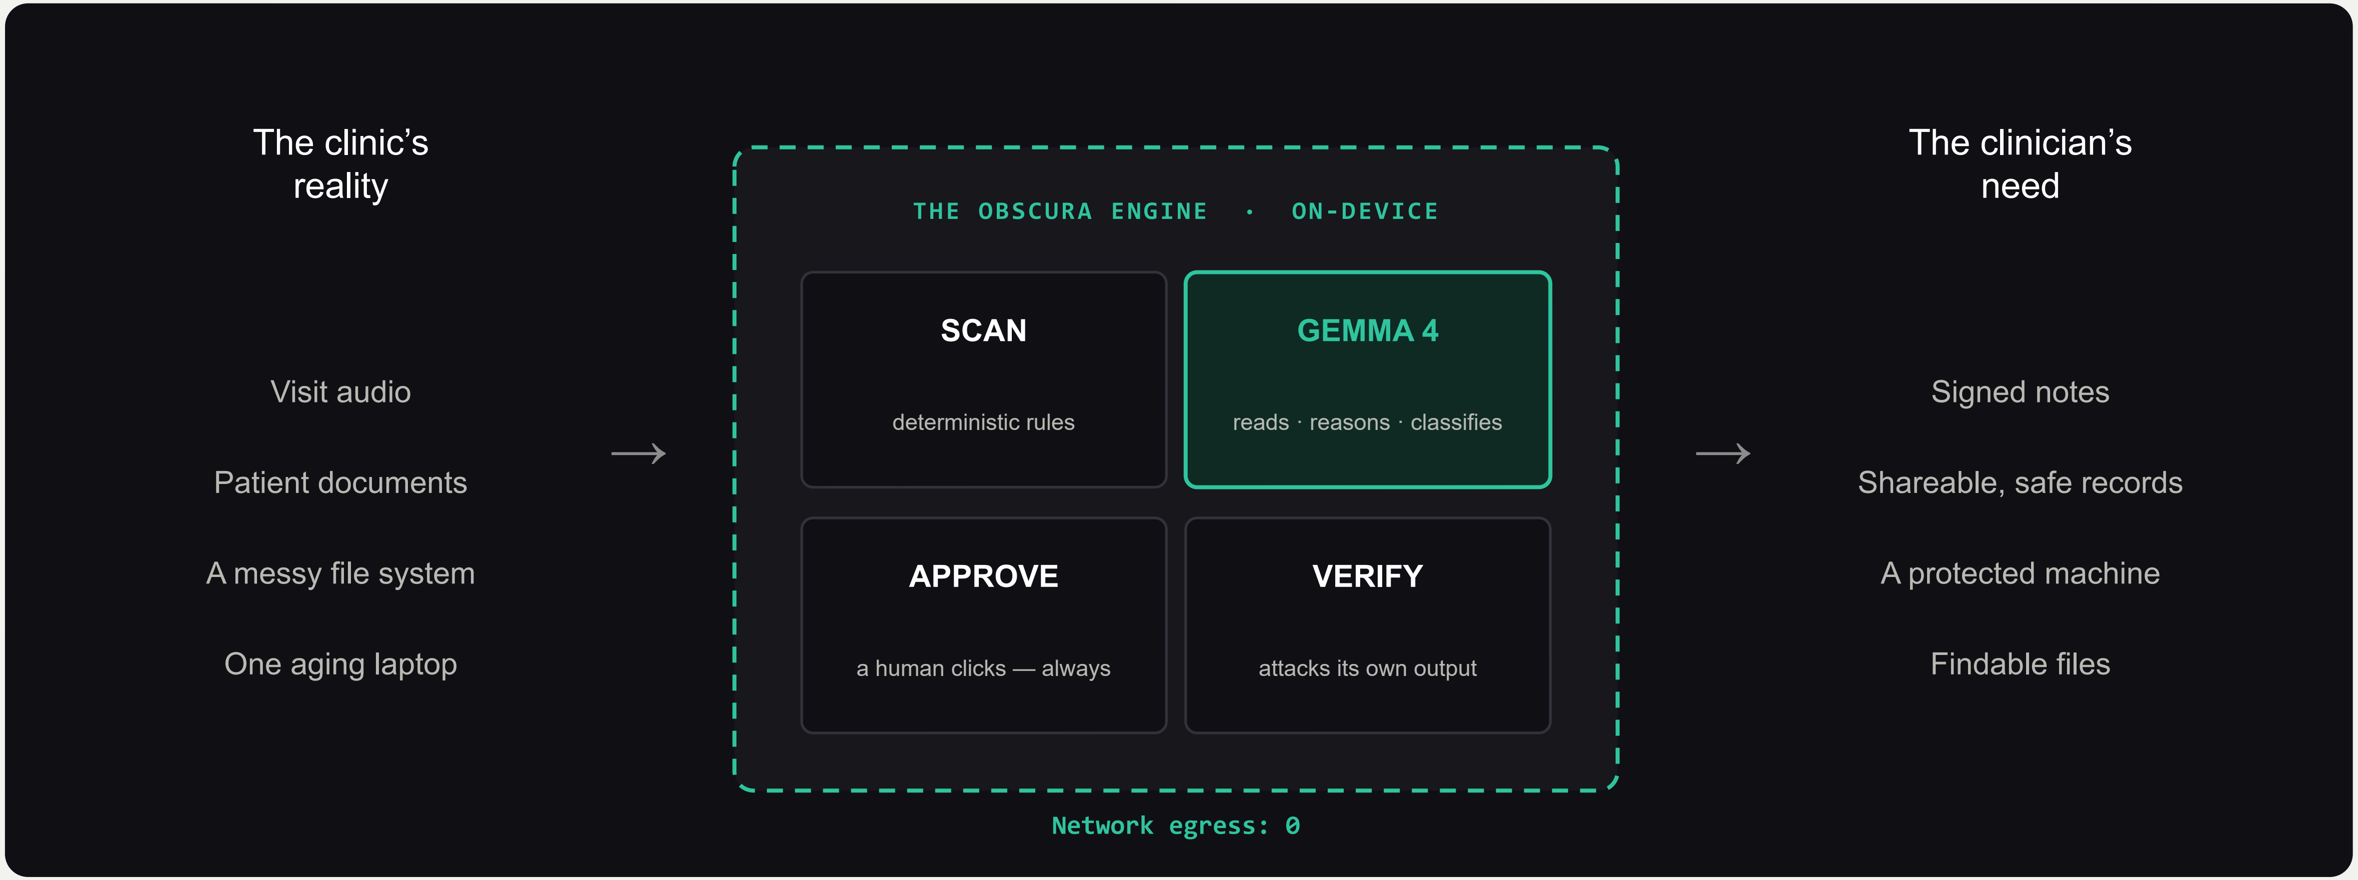
Shareable, safe records

A protected machine

Findable files

Through one engine that never leaves the room.

Gemma 4 — open weights, Apache-2.0 — runs frontier reasoning on the laptop the clinic already owns.



OBSCU
RA

Obscura →

One engine.
Four surfaces.

- + + + + + - + - + + + +

01	**Transcribe**	The visit writes itself. on-device speech → SOAP draft → clinician signs · no BAA because no third party	IN DESIGN
02	**Redact**	Share the record, not the patient. all 18 HIPAA Safe Harbor identifier categories · destroys pixels, never covers text	SHIPPED
03	**Secure**	A $0 IT department. CIS Level 1 checks · plaintext-secret scan · Safety Score · read-only, never executes	SHIPPED
04	**Organize**	Files that name themselves. Gemma reads page one · template-enforced names · crash-safe journal · one-click Undo	SHIPPED

The surfaces feed each other: SECURE finds a plaintext key → REDACT destroys it → ORGANIZE files the result.

One local Gemma 4 model powers every surface — before, during, and after each patient touchpoint

01 TRANSCRIBE

visit audio → structured SOAP draft

no third party — no BAA

02 REDACT

finds meaning; OCR pins the pixels

18 Safe Harbor identifier types

GEMMA 4

text · vision · reasoning
one Ollama gateway

03 SECURE

explains findings in plain English

CIS L1 checks · Safety Score

04 ORGANIZE

reads page one → doc-type · entity · date

code enforces names · Undo journal

SHARED SPINE / structured-JSON output · retry + repair loop · serialized GPU queue · hardware probe picks E4B or 12B · runs on an 8 GB laptop, Wi-Fi off

Obscura →

Obscura in Action

Built in one day. Verified before it was demoed.

0	recoverable characters after redaction — select-all, text-search, re-OCR, metadata audit all pass
16/18	HIPAA Safe Harbor identifier categories flagged on a synthetic patient record, live coverage panel
4	verification checks the tool runs against its own output on every single export
8 GB	of laptop GPU is enough — a hardware probe picks the right Gemma 4 variant per machine

VERIFICATION INDEX

01/	**SELECT-ALL TEST**	zero selectable characters	PASS
02/	**TEXT-SEARCH**	no redacted string findable	PASS
03/	**RE-OCR**	nothing readable survives in pixels	PASS
04/	**METADATA AUDIT**	document dictionary empty	PASS
05/	**EGRESS PANEL**	external connections: zero, live	PASS
06/	**UNDO REPLAY**	full reorganization reversed	PASS

The market charges $15,000+ a year for what a two-provider clinic gets here at $0.

AI SCRIBE	**$299–$1,512 / clinician / mo**	Suki · Nuance DAX Copilot (list $1,512; typical $369–830 + $5k–50k setup) · budget tier Freed $79–119
REDACTION SUITE	**$279–$379 / user / mo**	CaseGuard Doc & Ultimate suites · budget tier Redactable from $278/yr
MANAGED IT + HIPAA	**$100–$250 / user / mo**	small-practice HIPAA-ready MSP plans · HIPAA support adds $15–30/user
OBSCURA	**$0 · forever**	Apache-2.0, on hardware the clinic already owns — in a $1.2–2.8B market headed to ~$15B by 2034–35, all cloud, none priced for small practices

Pricing: vendor list / published reseller pages + 2026 pricing guides; market size: Dataintelo, Astute Analytica, SNS Insider, Grand View 2025–26. List prices — verify per quote.

Getting Started

From zero to private AI in one afternoon.

01 Install Ollama · pull Gemma 4 (two commands)

02 Clone the repo · pip install · run one server

03 Turn the Wi-Fi off — everything still works

04 Redact, scan, and organize with a human click on every action

The ask: pilot clinics to shape TRANSCRIBE · open-source contributors · EHR-integration partners

The same four surfaces generalize —

OBSCURA FOR CLINICS

OBSCURA FOR LEGAL AID

OBSCURA FOR SOCIAL WORK

OBSCURA FOR SCHOOLS

OBSCURA FOR FOIA OFFICES

OBSCURA FOR COURTS

OBSCURA FOR SHELTERS

OBSCURA FOR EVERYONE

As fast as AI.
As private as a locked filing cabinet.

Open models made this inevitable. We just built it first.
